### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. S. Sahota, reg. No. 47,051 on August 3, 2006.

2. The application has been amended as follows:

**Claim 1** A method for controlling transmission of fax data according to a data output order of a facsimile receiving part, the method comprising the steps of:

scanning and storing a document into data to be transmitted from a facsimile transmitting part to said facsimile receiving part;

selecting an advance-transmitting function to accommodate requiring said data output order;

dialing a predetermined telephone number of said facsimile receiving part when said document is completely scanned;

requiring and receiving said data output order by said facsimile transmitting part from said facsimile receiving part after the telephone number of said facsimile receiving part is dialed; and

displaying said data output order received from said facsimile receiving part, on a display of said facsimile transmitting part; and

Art Unit: 2625

transmitting by said facsimile transmitting part, said stored document data in the same order as said displayed ~~received~~ data output order.

**CANCEL Claim 2.**

**Claim 8** A method, comprising the steps of:

scanning a document into data to be transmitted from a facsimile transmitting part to a facsimile receiving part;

storing said data of said document in a memory of said facsimile transmitting part;

selecting an advance-transmitting function to accommodate requiring a data output order of the facsimile receiving part;

making a call by dialing a predetermined telephone number of said facsimile receiving part when said document is completely scanned and stored in said memory;

checking whether said call between said facsimile transmitting part and said facsimile receiving part is connected;

requiring a said data output order by said facsimile transmitting part from said facsimile receiving part when said call is connected;

receiving said data output order by said facsimile receiving part from said facsimile transmitting part after said requiring of said data output order;

displaying said data output order received from said facsimile receiving part on a display of said facsimile transmitting part; and

Art Unit: 2625

transmitting said data of said document stored in said memory in the same order as said displayed ~~received~~ data output order; and

~~displaying said data output order received from said facsimile receiving part on a display on an operational panel.~~

**Claim 13** A facsimile transmitting part apparatus, comprising:

a scanner of said facsimile transmitting part scanning data of a document and converting the data into digital image data;

a unit selecting an advance-transmitting function to accommodate requiring a document output order of the facsimile receiving part;

a control unit utilizing the digital image data from said scanner, said control unit controlling said facsimile transmitting part according to a system program, said control unit requiring and receiving a said document output order from a said facsimile receiving part, said document output order being an order of document pages determined by and being printed on said facsimile receiving part;

a display unit displaying the received document output order;

a memory storing said system program guiding said control unit, the digital image data from the document being stored in said memory before being transmitted to said facsimile receiving part by a transmission signal from said controller in the same order as the received displayed document output order;

an operational panel having a plurality of keys generating key data of said facsimile transmitting part to said control unit and said display unit, ~~said operational~~

Art Unit: 2625

~~panel having a display unit showing the document output order of said facsimile receiving part;~~

a modem through a control of said control unit modulating said digital image data into analog data formatted for transmission over a public telephone network; and

a network control unit forming a communication loop of the public telephone network having a ring and a tip and interface signals of said modem, the public telephone network being connected to said facsimile receiving part.

**CANCEL Claims 18 and 19.**

***Allowable Subject Matter***

3. **Claims 1, 3-17 and 20** are allowed. These claims will be renumbered as claims 1-17.

4. The following is an examiner's statement of reasons for allowance:

The prior art of record do not teach or suggest the combined limitations of selecting an advance-transmitting mode function to accommodate *said requiring* said data output order by said facsimile transmitting part when said call is connected (refer to page 17 of the applicant's argument filed on 5/23/06) and transmitting the stored data in the data output order displayed on the display of the transmitting facsimile part.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2625

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
